Ric, following is the weed management plan provided by Accuspray Solutions. Mr. Busby communicated with Stephanie at the City when writing it so it would comply with what she wanted. Do you have everything you need now in order to submit the final plans? When do you think you will be able to do that?

Thanks,

Dorothy

Accuspray Solutions management plan for West Vine Street Storage. The first year's applications will consist of nonselective weed control before ground prep of native area. After the seed is planted and has germinated we will fertilize the seeded area to promote growth, once the grasses are established and healthy we will administer a selective broadleaf weed control to eradicate noxious weeds in the late summer or early fall. In the fall, we will again fertilize to promote good root growth.

Second-year plan for native area grasses. The first application will be fertilizer for the native grasses. Once weeds start to germinate in May-June we will do a selective broadleaf weed control to help control weeds that

have emerged. The second application of broadleaf weed control will be administered in August-September to help eradicate weeds that have emerged. Spot treatments may be needed in between applications. In September-October we will apply the second fertilization to promote root growth. The third year will have the same plan of action as the second. If you have any questions please feel free to call.

Thank you,

Tyson Busby
