City Attorney's Office

Introduction

City of Fort Collins Utilities (City) has requested research services from the Colorado State University (CSU) Colorado Stormwater Center to improve the understanding of stormwater management practices within the City. This document is a proposal of several potential research activities that may be conducted by CSU in collaboration with the City.

Winter Runoff Monitoring in Spring Creek

Background

The City Streets Department (Streets) is responsible for keeping major roadways safe and passable, including during winter months when snow and ice hamper travel in roadways. To do so, Streets employs the use of various deicing materials (e.g. salt, Apex liquid deicer, etc..) to melt snow and ice so that it runs off travel lanes. Ultimately, the melted snow/ice and deicing materials end up in local rivers and streams where the “chemicals” from deicing materials may have detrimental impacts on aquatic life.

Objectives and Scope of Work

The primary objective of this research activity is to assess the potential impact of deicing material applications on aquatic life Spring Creek. Specifically, chloride concentrations in Spring Creek that occur throughout snow events. A secondary objective is to estimate the amount of applied deicing material that is delivered to Spring Creek and determine if deicing operations could be modified to improve the water quality in Spring Creek. To accomplish these objectives, CSU will perform the following tasks:

- Conduct a review of the current study site to ensure that drainage information and site characteristics have not changed throughout the course of previous studies.
- Submit water quality monitoring equipment to In-Situ labs to be serviced and replace the conductivity sensors in the units.
- Install four water quality sondes at strategic locations within Spring Creek to continuously monitoring specific conductance and water depth.
- Perform routine maintenance and data collection from the sites along Spring Creek on a weekly/bi-weekly basis to ensure correct reporting
- During deicing/runoff events, collect water samples in Spring Creek and analyze the samples for chlorides, it is estimated that 8 samples will be collected from each site for 4 events.
- Obtain deicing material application data from Streets and calculate the total amount of deicing material applied during each event. Compare amounts against in-stream concentrations.
- Using grab sample and in-stream data develop specific conductance and chloride relationships. Using specific conductance/chloride relationship, generate continuous record of chloride concentrations within Spring Creek
- Compare the magnitude and duration of chloride concentrations against criteria established for aquatic health.

- Develop written protocols for the installation of the in-stream monitoring sites, event sampling, and data analysis.

For this proposal the final task will either consist of chloride sample analysis or the development of a report highlighting changes that were made to the study from the 2017 year as well as including a section to inform the City about the data that is necessary to collect during the winter months to implement improvements to the study based on last study results. Both tasks will cost the same amount so it is up to the city to communicate which task it would prefer.

Written protocols and reports will be delivered to the City as technical memorandums.

Budget

The following table outlines the individual tasks and costs associated with this work.

* Indirect Costs: F&A rates are negotiated and approved by the Department of Health and Human Services, Colorado State University's cognizant federal agency. CSU's approved Modified Total Direct Costs (MTDC) rate as of July 1, 2017 is 52%. On this proposal, MTDC F&A is applied to direct costs minus GRA tuition.

Colorado State University's Indirect Cost Agreement and Fringe Benefit Rates may be viewed here: <https://vprnet.research.colostate.edu/OSP/facilities-and-administrative-rates-fa/>

** As with all proposal budgets the numbers herein are good-faith estimates based on the best information available at the time of proposal submission, and may be subject to change. University policy dictates that all rates and expenses will be charged at their actual costs or negotiated rates as applicable, at the time of project performance. University regulations require

that all contractual agreements be in place prior to the commencement of any work. Contract language and payment schedules are negotiated through the Office of Sponsored Programs and Colorado State University. Final scheduling is determined as contracts are finalized.

Technical Supervision

This research will be conducted under the primary supervision of Tyler Dell. Tyler is a Research Associate at CSU working under Dr. Mazdak Arabi and Dr. Sybil Sharvelle. Dr. Larry Roesner, as director of the Colorado Stormwater Center will also be reviewing the work conducted for the City of Fort Collins.
