Re: City of Ft. Collins volumes into LCLF

Jan. 21st, 2005

Dear Mr. Bonnette,

According to the refuse hauling agreement with the City of Ft. Collins, all volume collected from city facilities shall be disposed of at the Larimer County Landfill. As we have discussed in the past, due to logistical efficiencies Waste Management does not dispose of all of the "actual" volume from city containers into Larimer County, but does offset this volume with other designated equivalent volumes. This letter is to confirm how Waste Management diverts equivalent volume of waste to the Larimer County Disposal Site.

For the past 5 years we have designated 2 routes as the disposal volume for the City. For 2004 the units designated were units 204339 & 205846. These will remain the same for 2005 and after, unless replaced with new equipment. The below stats are for the 2004 volume.

204339 – 120 loads @ 28 compacted yards per load for 3360 total compacted yards
205846 – 110 loads @ 28 compacted yards per load for 3080 total compacted yards

When every city account is active WM collects 700 loose yards per week from city facilities. Our trucks compaction ratio averages 8 to 1. Thus 700 yards times 52 weeks would equal 36,400 loose yards. Divide this by the compaction ratio, and the city volume equals 4550 compacted yards. Our designated units disposed of an offsetting volume of 6440 compacted yards into the Larimer County landfill, clearly more than covering the city required volume.

If you have any further questions on this, please feel free to call Don Archuleta (416-3574) or myself (416-3565).

Thanks for your time and Business,

Dan DeWaard
