E. CHIMNEY INSTALLATION

Check the one that most nearly resembles your installation.

General Requirements:

1. Single wall pipe may be used only to wall or ceiling penetration and requires 18" clearance to combustible walls.
2. Horizontal runs must slope 1/4" per foot.
3. Double or triple wall pipe must be listed by an approved testing agency and generally requires 2" clearance to combustibles (the requirement is on the pipe).
4. The chimney termination must extend 2' above the highest point within a 10' radius and be protected with a
